2GIG® Stove & Grill Guard
Model # 2GIG-STVGRL1-345

## Worry-free cooking with 2GIG® Stove & Grill Guard

Nortek Security & Control is pleased to announce the availability of the new 2GIG® Stove & Grill Guard sensor for 2GIG® (GC2/GC3/Vario) and Honeywell Vista panels.

The first of its kind to market in the security industry, the 2GIG® Stove & Grill Guard provides effective awareness of burners that have been left on accidentally, whether after cleaning, cooking, or socializing. The user can also modify the time from once a burner has been turned on to when the notification will be sent. Notifications can be sent either smartphone or security panel alerts. As such, it gives families peace of mind when seniors are using a stove or grill because they are notified immediately of anything left on.

Slim and sleek (2.2" diameter, 0.21" thickness), the Stove & Grill Guard sensor attaches easily to most common stove or grill knobs. The product is water resistant for use both indoors and outdoors. With patent-pending highly sensitive alarm circuit technology, false negatives are minimized. Users will never have to experience the fear associated with leaving a burner on, or accidental knob turning that can lead to fires, gas leaks, and loss of propane.
